

# Zscaler Authentication Deployment and Operations Checklist

Use this checklist to mark the progress of your Zscaler Authentication deployment.

| <i>Deployment Step</i>                                                      | <i>Action Taken</i> | <i>Recommended Best Practice Used?</i> | <i>Contingencies (if applicable)</i> |
|-----------------------------------------------------------------------------|---------------------|----------------------------------------|--------------------------------------|
| Configure <a href="#">Identity Providers</a> on the ZIA Admin Portal.       |                     |                                        |                                      |
| Enable <a href="#">SAML Auto Provisioning or SCIM Provisioning</a> .        |                     |                                        |                                      |
| Bypass IdP URLs from authentication or bypass them completely from Zscaler. |                     |                                        |                                      |
| Enforce Authentication on specific locations.                               |                     |                                        |                                      |
| Enable Kerberos Authentication for desired locations                        |                     |                                        |                                      |
| Enable <a href="#">IP Surrogacy</a> on specific locations.                  |                     |                                        |                                      |
